Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	3 Marks

Project Executable Files

This section lists the executable and supporting files for the ServiceNow project, Implement Client Script & UI Policy (Incident). Organize and submit the project materials, configuration details, and instructions so the evaluator can review and reproduce the Incident form behavior.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Client Scripts for the Incident form (source/configuration details)	To be completed
2	UI Policies for the Incident form (configuration details)	To be completed
3	README / Setup Guide with steps to access and test configuration	To be completed
4	Incident form fields, conditions, and configuration notes	To be completed
5	Screenshots or evidence of Client Script and UI Policy behavior	To be completed
6	Test files and test results	To be completed
7	Update set or applicable ServiceNow configuration export, if available	To be completed
8	ServiceNow instance/access details for evaluator, if permitted	To be completed
9	Demo video or walkthrough, if required	To be completed
10	Additional supporting files required for submission	To be completed

Step 2: File / Folder Structure

Provide the actual project structure. Suggested organization (adapt to the files and exports available):

Folder / File	Contents
Incident_Client_Script_UI_Policy/	Main submission folder
README_Setup_Guide	Steps to access, configure, and test the Incident form
Client_Scripts/	Script names, scripts, and configuration screenshots/export
UI_Policies/	Policy names, conditions, and configuration screenshots/export
Test_Evidence/	Screenshots, test cases, and results
Update_Set/ (if applicable)	ServiceNow update set or exported configuration files

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	ServiceNow instance URL: _____
Login Credentials (Demo)	Provide evaluator-approved demo access securely. Do not include personal passwords.
Platform / Hosting Provider	ServiceNow
Repository / Update Set Link	Add repository or update set/export reference, if available: _____
Demo Video Link	Add walkthrough link, if required: _____

Step 4: Run Instructions

1. Sign in to the authorized ServiceNow instance with access to the Incident application.

- 2. Open the Incident form and identify the fields affected by the Client Scripts and UI Policies.
- 3. Follow the documented conditions and steps to trigger each script and policy.
- 4. Verify configured validation, mandatory status, visibility, or read-only behavior.
- 5. Record test outcomes and capture screenshots or other evidence.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Behavior depends on the Client Script and UI Policy conditions configured in the instance.	Document and verify conditions during testing.
2	Client-side behavior alone does not enforce server-side security or data access.	Use appropriate ACLs and server-side validation where needed.
3	Instance URL, demo access, exports, and evidence are not supplied in this template.	Fill in actual details before submission.

Note: Replace blank access fields and checklist statuses with actual submission details.
