

Project Demo Planning

Date	28 September 2026
Team ID	6ab221341
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	1 Mark

Project Demo Planning:

This demo plan presents the implementation of Client Script and UI Policy in the ServiceNow Incident module. The demonstration focuses on form behaviour, field validation, dynamic field visibility, mandatory conditions, and user interaction. The flow is arranged to clearly show the problem, configuration, live execution, and final result.

S.No	Demo Section	Description	Duration (mins)	Responsible Member
1	Introduction & Objective	Introduce the Incident module and explain the purpose of Client Script and UI Policy.	2	Team Member 1
2	Client Script Configuration	Show the Client Script configuration and explain the selected type, trigger condition, and form logic.	3	Team Member 2
3	UI Policy Configuration	Show how UI Policy controls field visibility, mandatory state, and read-only behaviour.	3	Team Member 3
4	Live Incident Demonstration	Create/open an Incident and demonstrate the configured Client Script and UI Policy behaviour.	4	Team Member 1
5	Result & Validation	Verify that the fields respond correctly according to the configured conditions.	2	Team Member 2
6	Q&A; Session	Answer questions related to Incident configuration, Client Script, and UI Policy.	2	Team Member 3

Demo Flow Summary:

Step	Activity	Notes
1	Introduction & Problem Statement	Explain the Incident form and the need for automatic field control and validation.
2	Solution Overview	Explain how Client Script handles client-side form logic and UI Policy controls field behaviour.
3	Live Feature Demonstration	Open an Incident record and demonstrate the configured conditions, field changes, and validation.

Step	Activity	Notes
4	Q&A; Session	Clarify configuration, execution, and expected results.

Expected Demonstration Outcome:

The final demonstration should show that the Incident form responds dynamically based on the configured Client Script and UI Policy conditions. Fields should become visible, hidden, mandatory, or read-only as configured, and the user should receive the expected validation or form behaviour during Incident creation or editing.
