

IDEATION PHASE

Define the Problem Statements

Date	28 September 2026
Team ID	6ab221341
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

IMPLEMENT CLIENT SCRIPT & UI POLICY (INCIDENT): PROBLEM STATEMENT TEMPLATE

I am	Describe customer with 3-4 key characteristics - who are they? they?	A ServiceNow ITSM user (e.g., an IT agent or manager), responsible for managing incident tickets in the system, prioritizing based on service level agreements.
I'm trying to	List their outcome or "job" the care about - what are they trying to achieve?	Quickly log and update incident tickets with correct information, ensuring accurate reporting and efficient assignment to relevant support teams.
but	Describe what problems or barriers stand in the way - what bothers them most?	The user spends unnecessary time manually validating fields or correcting simple errors before saving a ticket, which is frustrating and inefficient.
because	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	Client-side scripting and UI policies have not yet been implemented to enforce dynamic form logic, client-side data validation, or automatically set field values.
which makes me feel	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Prone to error, less productive, and concerned that data quality issues might lead to delayed issue resolution and inaccurate reporting.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An IT Support Agent handling ServiceNow tickets	Log and resolve incident tickets quickly and accurately	I spend extra time fixing manual form errors and missing details	The form lacks real-time Client Script validation and automatic field responses	Frustrated, delayed, and prone to data entry errors
PS-2	An Incident Manager tracking team performance	Ensure high data quality and strict SLA compliance for incidents	Submitted tickets are often missing key details or proper field logic	UI Policies are not configured to dynamically enforce mandatory fields based on ticket state	Stressed, concerned about SLA breaches, and overwhelmed by data cleanup
