

IDEATION PHASE

Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	6ab221341
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template: Brainstorming provides a free and open environment for identifying possible solutions to a problem. For this ServiceNow project, the team brainstormed different ways to improve the Incident form using Client Scripts and UI Policies. The ideas were then grouped and prioritized based on their importance and feasibility.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

SERVICENOW INCIDENT MANAGEMENT

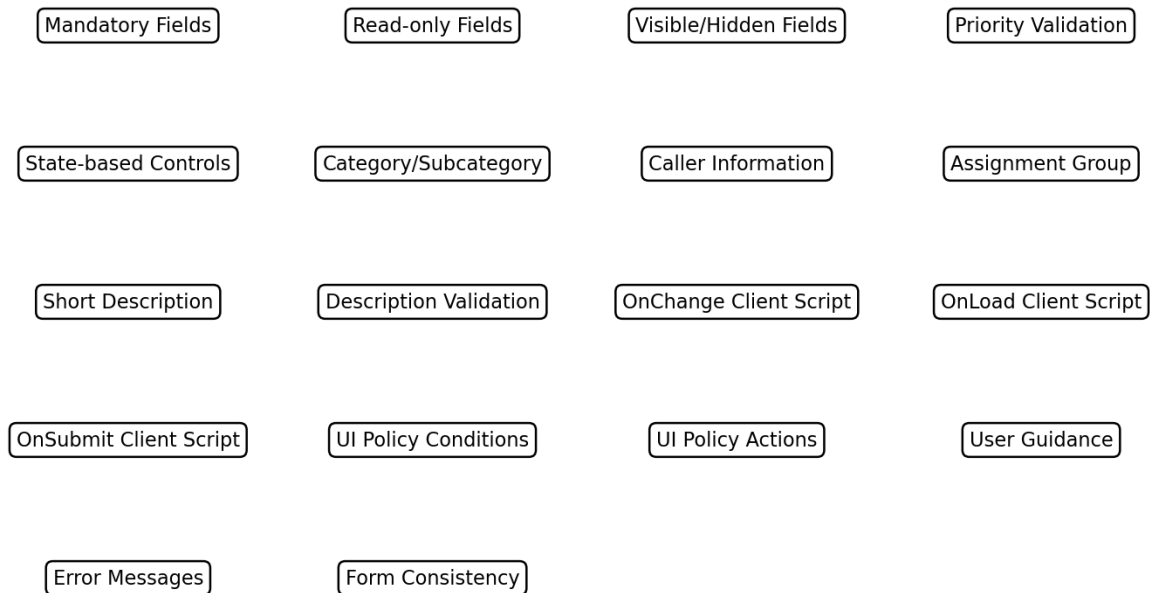

Problem Statement

Incident forms need consistent behavior and user guidance. The project aims to use Client Scripts and UI Policies to dynamically control Incident fields, improve data entry, and reduce incorrect or incomplete information.

Problem Statement: Incident records in ServiceNow may require dynamic form behavior such as making fields mandatory, read-only, visible or hidden based on field values and form conditions. Without appropriate Client Scripts and UI Policies, users may enter incomplete or inconsistent incident information. The project therefore focuses on implementing Client Scripts and UI Policies on the Incident table to improve form behavior, validation and data quality.

Step-2: Brainstorm, Idea Listing and Grouping

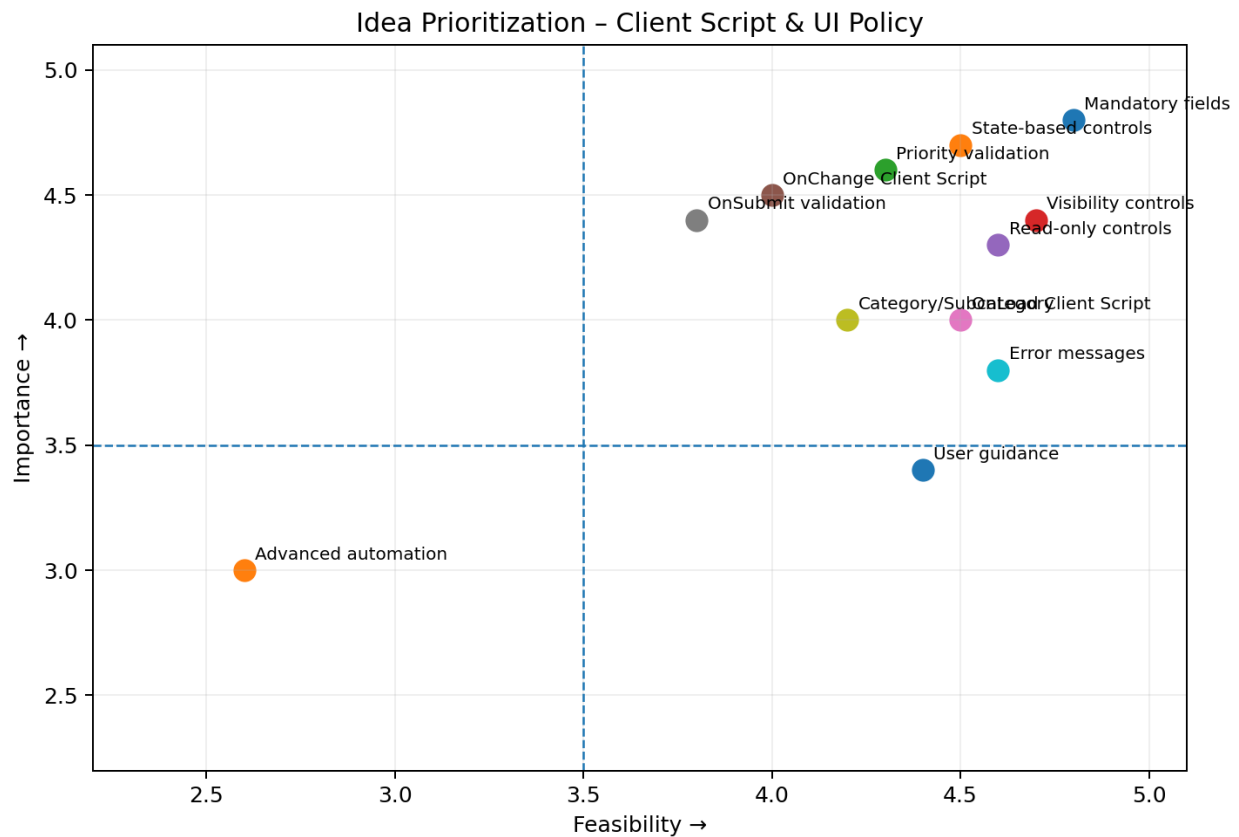

Brainstorm - Incident Form Ideas

The team identified the following possible requirements and implementation ideas:

Group	Ideas
Client Scripts	onLoad, onChange and onSubmit scripts; field validation; dynamic messages
UI Policies	Make fields mandatory, make fields read-only, show/hide fields based on conditions
Incident Fields	Caller, Category, Subcategory, Priority, State, Assignment Group, Short Description, Description
Validation	Mandatory data checks, priority-related validation, incomplete information prevention
User Experience	Clear form behavior, user guidance, consistent Incident form interaction
Data Quality	Prevent invalid/incomplete submissions and maintain consistent Incident records

Step-3: Idea Prioritization

The ideas were prioritized using an Importance-versus-Feasibility matrix. Importance indicates how strongly a feature contributes to correct Incident management, while feasibility indicates how practical it is to implement using ServiceNow Client Scripts and UI Policies.

The core implementation focuses on mandatory-field control, state-based behavior, priority validation, visibility and read-only controls, and Client Scripts for onLoad, onChange and onSubmit behavior. These functions directly support the project's objective of improving Incident form validation and user interaction.

Expected outcome: a more consistent Incident form in which fields respond appropriately to user selections and form conditions, required information is captured, and invalid or incomplete submissions are reduced.
