

Implement Client Scripts & UI Policies (Incident)

CUSTOMER JOURNEY MAP

SCENARIO	1	2	3	4	5	6	7	8	9	10
Creating, validating, updating, and submitting an Incident in ServiceNow.	Open ServiceNow	Open Incident Form	Enter Incident Details	Validate Input	Dynamic Field Behaviour	Apply UI Policy	Review Incident	Submit Incident	Update Incident	Configuration & Testing
Interactions	Access ServiceNow via browser and navigate to the Incident application.	Click "New Incident" and open the incident form.	Fill in required fields (e.g., short description, category, priority).	System validates input and shows error messages if needed.	Fields show/hide or become mandatory/read-only based on conditions.	UI Policy enforces mandatory, visible and read-only behaviour.	Review all details before submission (visible/mandatory fields).	Click "Submit" to create the incident.	Update the incident status, comments or additional details as required.	Work with admin to configure scripts, policies and test the behaviour.
Things	Web browser, ServiceNow portal.	Incident form UI (web page).	Keyboard, mouse, dropdowns, calendar, form fields.	On-screen validation messages, error indicators.	Dynamic fields, helper text, field visibility changes.	UI Policy indicators (mandatory asterisk, read-only fields).	Incident form view, field labels, information icons.	Submit button, confirmation message.	Incident record, update form, comment field.	Script Editor, UI Policy settings, Test tools.
Places	ServiceNow home page / portal.	Incident application page.	Incident form page (in ServiceNow).	Same incident form page.	Incident form page (with dynamic fields).	Incident form page (with UI Policy effects).	Incident form page.	Incident form page (submit section).	Incident list / record page.	ServiceNow configuration (Studio / Scripts / UI Policies).
People	Self (End User), Service Desk team (if needed).	Self.	Self.	System messages (no direct person).	System (field behaviour).	System (UI Policy).	Self (review).	Self (submit).	Service Desk Agent (or assigned team).	Administrator / Developer (for configuration & testing).
Positive moments	Quick access to ServiceNow, easy navigation.	Simple and clear incident form.	Guided fields, help text, dropdowns.	Instant feedback on incorrect input.	Automatically adapting fields based on selection.	Smarter form behaviour and fewer manual steps.	Clear review of details before submit.	Successful submission message.	Keeping incident updated and tracking progress.	Seeing the configuration work as expected during testing.
Negative moments	Login issues / access problems.	Finding the right application.	Missing or unclear field information.	Validation errors or unclear messages.	Confusion about field visibility or mandatory status.	Unexpected field changes / restrictions.	Rechecking details before submit.	Submission errors or delays.	Updates not reflecting immediately.	Complex configuration or script errors during testing.
Areas of opportunity	Provide quick links and role-based access.	Add tooltips and guidance text.	Use form sections and clear instructions.	Show clear, user-friendly error messages.	Visual indicators for dynamic changes.	Explain UI Policy behaviour with help text.	Show a summary panel for review.	Add success confirmation and next steps.	Allow easy update and history view.	Provide sample scripts, templates and testing guidelines.
Goals & motivations	Help me access ServiceNow quickly and securely.	Help me create a new incident easily.	Help me provide accurate and complete information.	Show me avoid errors and submit correctly.	Help me save time with automatic field behaviour.	Help me avoid manual mistakes and ensure compliance.	Help me confirm the incident details are correct.	Help me get the incident submitted successfully.	Help me keep the incident updated and track progress.	Help me configure, maintain and test the system properly.
