

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	28 September 2026
Team ID	6ab221341
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Incident Form Management	Create and enter incident details in the ServiceNow Incident form
FR-2	Client Script Validation	Validate user input and display appropriate messages for invalid or incomplete data
FR-3	Dynamic Field Behaviour	Update incident fields dynamically based on user selections and form conditions
FR-4	UI Policy – Mandatory Fields	Make specified incident fields mandatory when the configured condition is satisfied
FR-5	UI Policy – Field Visibility	Show or hide incident fields based on the configured UI Policy condition
FR-6	UI Policy – Read-only Fields	Make specified incident fields read-only when the configured condition is satisfied

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Incident form should be simple and easy for users to understand and operate.
NFR-2	Security	Only authorized ServiceNow users should be able to access and update incident information.
NFR-3	Reliability	Client Scripts and UI Policies should execute consistently according to their configured conditions.
NFR-4	Performance	Form field changes and client-side validations should respond quickly without unnecessary delay.

NFR-5	Availability	The Incident form and configured rules should be available whenever the ServiceNow application is accessible.
NFR-6	Scalability	The configuration should support additional Client Scripts and UI Policies as incident requirements grow.
