

Project Design Phase Solution Architecture

Date	28 September 2026
Team ID	6ab221341
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Solution Architecture:

The solution architecture for Implementation of Client Scripts & UI Policies focuses on improving the behavior and usability of ServiceNow forms through client-side automation and configuration. The solution is designed to:

- Identify form requirements and determine where Client Scripts and UI Policies are required.
- Use Client Scripts to perform client-side validation, auto-populate fields, and dynamically respond to user actions.
- Use UI Policies to control field visibility, mandatory status, and read-only behavior based on specific conditions.
- Reduce manual data-entry errors and ensure that users provide the required information.
- Provide a simple, consistent, and user-friendly ServiceNow form experience.
- Define the required configurations, conditions, scripts, and testing steps for implementing the solution.
